PROFESSIONAL SUMMARY

Java Full Stack Developer with around 6 years of experience building secure, scalable, and cloud-ready enterprise applications using Spring Boot, Spring MVC, REST APIs, React.js, Angular, AWS and Azure. Strong background in microservice architecture, event-driven systems, and database optimization across PostgreSQL, MongoDB, and DynamoDB. Skilled in OAuth2.0, JWT, Spring Security, Kafka, RabbitMQ, Docker, Kubernetes, and CI/CD pipelines using GitHub Actions, GitLab, and Jenkins. Adept at writing clean, test-driven code with JUnit and Mockito, improving API performance, strengthening system reliability, and delivering high-quality features in Agile environments.

SKILLS

Project Management & Methodologies: SDLC, Agile/Scrum, TDD, Jira

Programming Languages: C, C++, Java, Python, J2EE (Servlets, JSP, EJB, JMS), SQL, PL/SQL

Front End: HTML5, CSS3, JavaScript, TypeScript, JSON, XML, React.js, Redux, Angular, RESTful API

Backend: Spring Boot, Spring REST, Spring MVC, Spring Cloud, Spring Data JPA, Hibernate

Security & Compliance: Spring Security, OAuth2.0, JWT, Role-Based Access Control (RBAC)

Database & Message Brokers: MySQL, PostgreSQL, Oracle, Neo4j, MongoDB, Firebase, Apache Kafka, RabbitMQ

Cloud: AWS (API Gateway, Lambda, DynamoDB, EC2, S3, CloudFormation, CloudWatch, SNS, SQS), Azure

CI/CD and DevOps Tools: Maven, Gradle, Git, Jenkins, Docker, Kubernetes, GitHub Actions, GitLab

Tools & Technologies: IntelliJ IDEA, Eclipse, Postman, Unit Testing (JUnit, Mockito), React Testing Libraries

AI & Developer Productivity: GitHub Copilot, ChatGPT API Integration, AI-Assisted Code Generation, Test Case Automation

WORK EXPERIENCE

PNC Financial Services, USA | Java Full Stack Developer

July 2024 – Present

- Architected Spring Boot and Spring MVC-based microservices to modernize PNC's loan-servicing workflows, cutting API latency by 32% and ensuring compliance with internal security standards through Spring Security with JWT authentication flows.
- Engineered event-driven data pipelines using Apache Kafka, enabling real-time customer-transaction updates across distributed systems and reducing inter-service sync failures by 41% in high-volume financial operations.
- Established responsive React.js interfaces for dispute-resolution and account-management modules, improving task completion speed for analysts by 28% through optimized state handling and reusable UI components.
- Deployed cloud-native APIs using AWS API Gateway, DynamoDB, and CloudFormation, automating environment provisioning and lowering infrastructure setup time from hours to under 15 minutes while meeting bank-grade resiliency requirements.
- Integrated Neo4j graph-based models to enhance fraud-detection relationship mapping, enabling graph traversal queries that reduced false-positive investigations by 19% during compliance evaluations.
- Automated CI/CD pipelines with GitHub Actions, implementing unit test coverage (JUnit) and AI-assisted code generation (GitHub Copilot and ChatGPT API) to accelerate delivery cycles and speed up release frequency by 25% without compromising code quality.

Zensar Technologies, India | Java Full Stack Developer

June 2021 – June 2023

- Designed Spring Boot and Spring REST microservices for enterprise billing modules, applying Spring Data JPA and PostgreSQL optimizations that improved query performance by 27% and stabilized monthly batch processing.
- Implemented OAuth 2.0 secured APIs enabling role-based access control for customer and partner portals, reducing unauthorized API access incidents by 35% across integrated systems.
- Built React.js and Redux dashboards for account insights and transaction activity, cutting page load times by 22% and increasing user workflow efficiency through state-managed UI components.
- Orchestrated asynchronous messaging pipelines using RabbitMQ, improving inter-service reliability and reducing message delivery delays by 40% in high-traffic application flows.
- Delivered scalable application workloads on AWS Lambda and EC2, integrating CloudWatch metrics and alerts that reduced incident resolution time by 30% and supported continuous production stability.
- Streamlined CI/CD delivery using GitLab pipelines and containerized services on Kubernetes, enabling automated testing with React Testing Library and accelerating release cycles by 25% in Agile sprints.

Fusion Software Technologies, India | Jr. Java Full Stack Developer

July 2019 – May 2021

- Developed Spring MVC and Hibernate modules for internal order-processing systems, optimizing PL/SQL and MongoDB data access patterns and reducing average query time by 18% across frequently used transactions.
- Integrated Angular and TypeScript components for employee self-service workflows, improving form interaction speed by 20% and reducing UI-related defect tickets during UAT cycles.
- Constructed JMS-based asynchronous message handlers to stabilize inter-service communication, decreasing message retry rates by 25% in peak-load operational windows.
- Containerized microservices with Docker and orchestrated deployments on Azure App Services, integrating builds into Jenkins CI pipelines and shortening deployment turnaround time by 30% for QA and staging environments.
- Practiced Test-Driven Development using JUnit and Mockito, increasing unit test coverage to over 75% and preventing recurring defects across core business-logic modules.

EDUCATION

Master's in computer science | University of Central Missouri, MO, USA
